

5-9

Intentionality After Work

For new grads, dedicating purposeful time towards themselves and others can feel impossible—it's easier to just watch Netflix every day after work. 5-9 solves this problem by making it straightforward to **set, do, and reflect on intentions** users set for themselves, whether it's seeing an old friend or meditating after a long day of meetings.

Market Research: Nudge

Product: Nudge

Product space: Geographically curated activity planning for young adults

Key Differentiators:

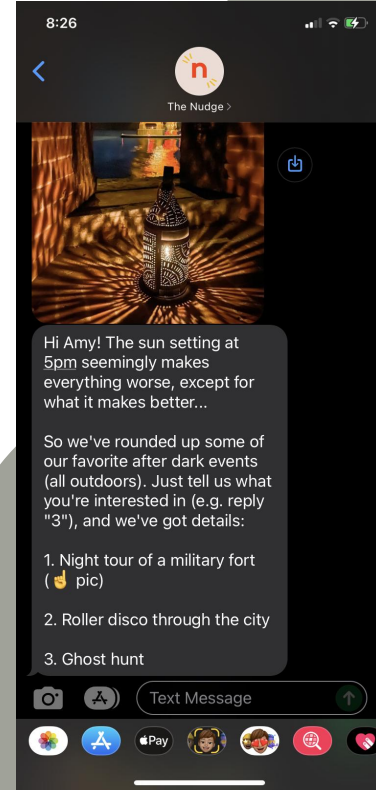

- Nudge only presents users with activities, 5-9 also connects users with their friends during overlapping free times
- Nudge relies on **twice weekly text notifications**, 5-9 is not notifications based
- Nudge does not differentiate between social activities and self care activities, 5-9 will

What Works:

- Sending text allows app to “circumvent app notification fatigue”
- Works with local influencers to get trendy ideas
- Texts contain activity idea and links to a more fully fledged plan (with photos, address, logistics, etc.) that also tracks user engagement
- Writes texts in “friendly, narrative style”
- Intentionally only sends two texts a week to avoid spamming user

What Doesn't Work:

- Customizing activities on a per user basis.
- Says that they want to stay away from promoting specific products/services/events as it would ruin their credibility.
- Venue overcrowding since they send the same plans out to a large group of people now.

Tasks

SET INTENTION (EASY):

- Set intention for the rest of your day: self-care, social, nothing at all

DO INTENTION (HARD):

- Either, find an interesting activity to do alone
- Or, find an exciting activity to do with your friend,
and identify a suggested time slot when both you and a friend
are free

REFLECT ON INTENTION (MEDIUM):

- Rate how you spent your free time that day
- Look back on how you spent your free time in the past

Values in Design

Embedded Values:

- Create personal accountability
- Cultivate personal wellness and lifestyle sustainability
- Promote social exploration
- Suggest user-specific activities for unique experience

Conflicting Values:

- Customization and privacy surrounding scheduling
- Active socialization and wellness/self-care

Addressing Conflicts:

- Trading-off: allow user to choose how to prioritize socializing vs. self-care
- Compromising: opt-in to sharing calendar and other personal details

Video Storyboards

Task 1 : set Intention

Leaving yet another day of work

Return home to cycle of phone and Netflix

Hand labelled "5-9" slaps laptop shut and hands over phone

back view

As if magically, main character sees options in front of his eyes!

user selects an option that appears above by pointing

user selects time, cementing plan with friend!

Task 2: Do Intention

voiceover reminds user of
coffee with a friend...

... he walks in to see
her waiting outside a
coffee shop!

Happy music plays,

camera
follows
them
walking

hours pass as we watch
them hang out together!

happy music

we watch the friends
hug and say goodbye!

happy music

user heads home after
successful socializing!

Task 3 : Reflect on Intention

user returns home

voiceover asks for rating of social activity...

... user points up to select 4 stars!

user goes to bed happy

alarm goes off

user wakes up happy, high fives hand reading "5-9"!
